

### 1.State vs Death Cases

This graph represents the **total number of COVID-19 death cases** reported in each state. It helps compare the impact of the pandemic across different states by identifying those with higher and lower mortality rates. The visualization provides a clear understanding of the distribution of COVID-19 deaths among the states.

### State vs LPG Shortage, LPG Consumption, and People Migration

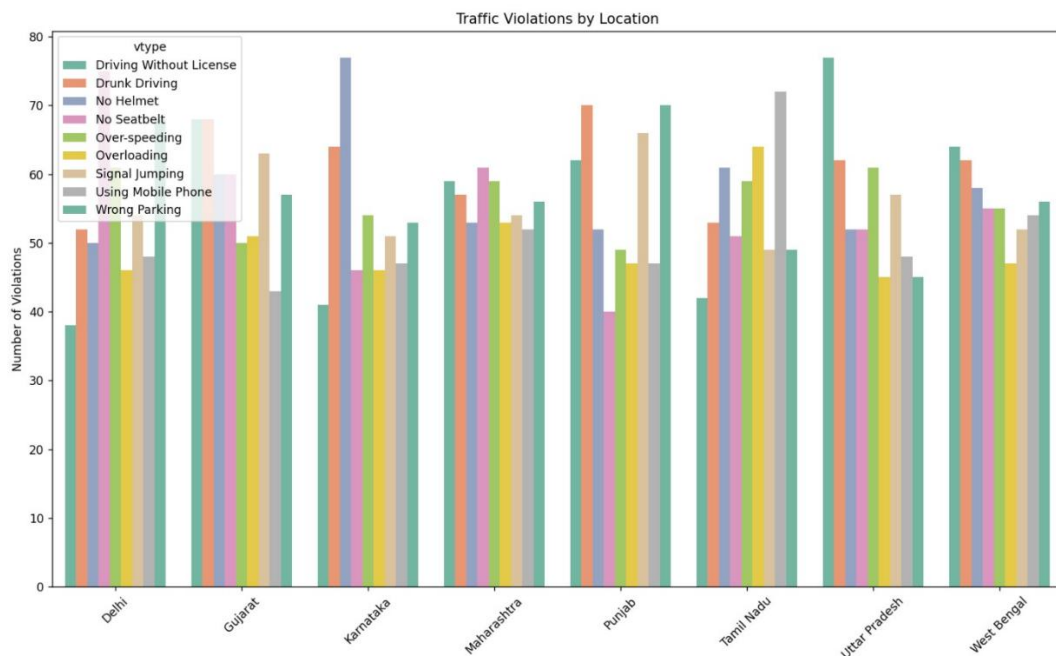

This graph compares the **LPG shortage**, **LPG consumption**, and the **number of people migrated** across different states. It helps identify the relationship between LPG availability, consumption patterns, and migration trends, enabling a better comparison of resource distribution and population movement among the states.

## State vs Violation Type

This graph shows the distribution of different traffic violation types across various states. It helps analyze which types of traffic violations are more common in each state.

If you want the complete text exactly as shown in the PDF, upload the PDF file itself and I can extract all the text accurately.

## State vs Cancer Cases and Deaths

This graph compares the total **cancer cases** and **cancer-related deaths** across different states. It provides a clear comparison of the disease burden and mortality rates, helping identify states with higher cancer incidence and death rates. The visualization supports better analysis of the impact of cancer across various regions.
